All Lines Technology
AllCloud
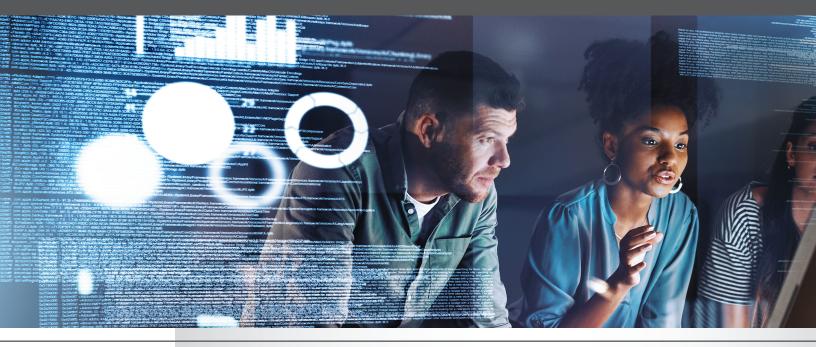

Affordable and Efficient Cloud-based Disaster Recovery

Disaster recovery is a critical feature that every business, large or small, should employ. From hardware failures to large-scale natural disasters, businesses must be prepared to bounce back within the shortest time-frame possible. Disaster Recovery as a Service is ideal for organizations where dedicated, off-site, disaster recovery infrastructure is not accessible.

Use of our cloud platform enables DR plan testing that can be regularly undertaken without disruption to your production environment. It's an incredibly cost-effective "pay as you grow" approach you pay a minimum monthly fee based on the number of servers protected and storage consumed, avoiding further infrastructure investment.
