

Fully Dedicated Infrastructure from Top to Bottom

A managed private data center in the cloud is a computing environment that provides the benefits of a private data center with the added convenience and flexibility of cloud technology. Unlike a public cloud, a managed private data center is not shared with other users, providing greater security and control over data.

All Lines Technology's fully managed private cloud services solve the rapidly evolving enterprise customer business challenges in deploying hybrid or dedicated cloud services. Our offerings avoid many of the technical, political, and organizational obstacles that impede private cloud adoption while neutralizing the security and regulatory concerns that many customers must face with public cloud.

Discover the most flexible and cost-effective single-tenant cloud service available. Built to order, Managed Private Cloud is a performance-oriented solution designed for mid- large-sized enterprises. As a robust cloud platform tailored to meet your exact IT and business needs, it efficiently supports your operations.
